The flowering season of Narcissi begins extremely early and lasts until quite late. As cut flowers they have few equals. Culture is the easiest possible. Plant in any good garden soil; cover to a depth of about twice the height of the bulb, measuring from the base to tip. Early planting is advisable; however, many fine flowers are produced from plantings made after the first of February. Narcissi multiply quite freely. Every three or four years they should be taken up during summer or early fall and replanted. Never remove green foliage from the bulbs.

No garden is too small for a few Daffodils.
